📝 Set Practice Questions

1. Create a set `fruits` containing `"apple"`, `"banana"`, `"mango"`. Check if `"cherry"` is in the set.

2. Add `"cherry"` to the `fruits` set and print the updated set.

3. Create two sets: `set1 = {1, 2, 3}` and `set2 = {4, 5, 6}`. Merge `set2` into `set1` using a method and print the result.

4. Create a set `s = {10, 20, 30, 40}`. Remove `20` using `remove()` and print the set.

5. Create a set `s = {10, 20, 30, 40}`. Try to remove `50` using `discard()` and print the set.

6. Create a set `s = {"apple", "banana", "kiwi"}`. Use `pop()` and print the popped element and the remaining set.

7. Create a set `colors = {"red", "green", "blue"}`. Add `"yellow"` using a method and print the set.

8. Create a set `numbers = {1, 2, 3}`. Update it with another set `{3, 4, 5}` and print the updated set.

9. Create a set `s = {"python", "java", "c++"}`. Check the **length** of the set and print it.

10. Create a set `s = {1, 2, 3, 4, 5}`. Iterate through the set and print each element.
